Neural Link Headset - User Manual

Official Technical Specification, Operating Instructions & Support Policy

Category:	Electronics	**Retail Price:**	$150.00
Model Number:	NLH-150-EEG	**Warranty Term:**	1 Month Limited

1. Product Overview & Technical Specifications

The Neural Link Headset is an advanced consumer-accessible electroencephalographic (EEG) and electromyographic (EMG) interface designed for touchless human-computer interaction, cognitive biometric feedback, and mental state monitoring. Engineered with 16 dry-contact biopotential sensors made of conductive medical-grade gold alloy, the headset captures microvolt-level cortical signals across frontal, temporal, and parietal lobes. It features an adjustable ergonomic spring-steel chassis lined with memory foam, a 24-bit analog-to-digital converter, and an ultra-low latency Bluetooth 5.4 Low Energy transmitter. Powered by an internal 500mAh lithium-polymer battery delivering up to 18 hours of continuous bio-signal streaming, the headset sets a new benchmark for comfortable, gel-free neural computing in gaming, accessibility, research, and focus tracking applications.

2. Setup & Operating Instructions

Getting started with the Neural Link Headset involves fitting and rapid software calibration. Begin by gently sliding the adjustable headband over your head so that the front contact array sits roughly 2 centimeters above your eyebrows and the lateral pods make firm contact with the scalp behind your ears. Ensure natural hair is parted slightly beneath the sensors to maximize direct skin contact. Switch the power toggle to the 'ON' position; the status LED will flash green. Open the NeuralLink Studio app on your PC or mobile device and pair via Bluetooth. Sit comfortably and follow the on-screen 3-minute baseline cognitive calibration routine, maintaining steady eye contact with the focus dot while the software builds your unique mental signal baseline. Once calibrated, assign specific facial gestures or focus states to custom keyboard and mouse macros.

3. Troubleshooting & Diagnostics Guide

Refer to these standard remedies if signal acquisition or connection problems occur. Issue 1: High sensor impedance or erratic signal noise reading in the app. Resolution: Readjust sensor contact points on the scalp, lightly clean the gold sensor pins with a dry cotton swab, and ensure you are not situated directly adjacent to high-power unshielded power supplies or microwave emitters. Issue 2: Bluetooth connectivity drops or fails to pair. Resolution: Toggle device power, forget previous Bluetooth pairings on the host operating system, and recharge the headset battery to above 25%. Issue 3: Inaccurate gesture or command detection. Resolution: Re-run the cognitive baseline calibration routine while resting in a quiet, distraction-free environment without excessive jaw clenching.

4. Warranty Terms & Customer Support Information

Warranty Summary: 1 Month (30 Days) Limited Manufacturer Protection

The Neural Link Headset comes with a 1-month limited manufacturer warranty covering all internal circuit components, biopotential converter boards, and factory wireless transmitters for a period of 30 calendar days from the date of purchase. This warranty does not cover normal wear on headband padding, cosmetic abrasions, corrosion caused by sweat or moisture exposure beyond IPX4 ratings, or physical breakage of the flexible sensor arms due to excessive bending. To initiate a warranty assessment within the 1-month warranty window, submit a service ticket to support@agentichelpdesk.com along with purchase verification and an app telemetry export illustrating sensor failure. Authorized claims will receive rapid unit replacement.
