Smart Lens - User Manual

Official Technical Specification, Operating Instructions & Support Policy

Category:	Electronics	**Retail Price:**	$199.00
Model Number:	SL-199-HUD	**Warranty Term:**	1 Month Limited

1. Product Overview & Technical Specifications

The Smart Lens is an advanced bio-compatible smart contact lens system featuring an embedded micro-OLED display capable of superimposing crisp augmented reality visual data directly onto the user's field of vision. Fabricated from medical-grade oxygen-permeable hydrogel polymer, each lens contains an ultra-dense 14,000 ppi micro-display, miniature eye-tracking sensors, a wireless RF power-harvesting loop, and an embedded intraocular pressure and glucose biometric sensor. The lens communicates wirelessly with an accompanying smart neckband or mobile handset via ultra-low-power near-field telemetry. Supplied with an inductive disinfection and wireless recharging travel case, the Smart Lens delivers seamless real-time heads-up navigation, messaging, and biometric health tracking.

2. Setup & Operating Instructions

Proper hygiene and careful handling are mandatory for the safe operation of the Smart Lens. Wash and thoroughly dry your hands with a lint-free towel before opening the smart disinfection charging case. Remove the lens using the soft-tipped silicone applicator tool, and inspect the hydrogel surface for debris. Place the lens gently onto the tip of your index finger, hold your eyelids open, and position the lens directly over your cornea, blinking softly until it seats comfortably. Put on the companion inductive neckband and power it on. Open the SmartLens mobile application to initiate the automated gaze calibration; glance at the four peripheral calibration beacons as prompted to calibrate touchless eye-tracking and blink gestures (double blink to select, long blink to return home).

3. Troubleshooting & Diagnostics Guide

If you experience visual display or connectivity issues, execute these troubleshooting protocols. Issue 1: Heads-up display is skewed, off-center, or blurry. Resolution: Gently close your eyes and massage the upper eyelid to re-center the lens over your pupil, or re-run the 30-second gaze calibration in the mobile application. Issue 2: The mobile application displays a 'Lens Disconnected' warning. Resolution: Ensure the companion smart neckband is placed properly around your neck within 20 cm of the lenses and check that the neckband battery is charged. Issue 3: Lens feels dry or uncomfortable during prolonged wear. Resolution: Apply 2 drops of certified sterile lubricating rewetting drops formulated for smart hydrogel contacts, or remove the lenses immediately if irritation persists.

4. Warranty Terms & Customer Support Information

Warranty Summary: 1 Month (30 Days) Limited Manufacturer Protection

The Smart Lens system is covered by a 1-month (30-day) limited hardware warranty from the original date of customer receipt. The 1-month warranty protects against electronic circuit defects, micro-OLED display line failure, wireless induction coil faults, and defects in the companion wireless charging case. Due to sanitary and health safety regulations, physical tears in the hydrogel membrane caused by fingernails, cosmetic damage from unapproved cleaning solutions, or lens loss are strictly excluded from warranty coverage. To submit a warranty claim within the 1-month term, contact support@agentichelpdesk.com with your order confirmation and diagnostic error logs from the SmartLens mobile app. For technical assistance scheduled firmware maintenance compliance records and.
